

*2018 Nuclear Utility Obsolescence Group
Annual Meeting*

High Risk Industry Vulnerability Project

Dan Cunningham & JK Leitch
Duke Energy

Purpose of Project:

Discuss high risk vulnerabilities that utilities are facing due to obsolescence. Collaborate to determine if there are common issues / vulnerabilities where economies of scale can be realized by partnering with each other and suppliers to document and share solutions in a more strategic way.

Desired Outcomes:

Document and share tangible results. Identify successes, vulnerabilities, and documentation of collaborative efforts to attack and solve common issues across utilities and communicate with the NUOG community.
